1. A short distance south of the Tociuk (N50/L00) railroad station seven cylindrical metal gasoline tanks are being sunk in the ground to about half their depth, the part above ground being covered with earth. Six of these tanks will hold about 600,000 liters; the seventh will contain about 1,000,000 liters. There is no sign of a pipeline being laid to connect the tank area with the Klatovy airfield, which is about 1,200 m distant.
2. No improvements have been made to the Klatovy airfield, which is connected with the city by a good concrete highway. There are no concrete runways, but only grass landing strips. The field has one concrete hangar 30 m by 15 m in area and some lesser buildings. There is no direction finder station or field lights. During the dry season the field is capable of handling bombers.
3. The airfield at Breclav, which was turned into farmland after the Communist coup in 1948, is being reconverted by military authorities into an airfield. Two large water tanks are being erected and large buildings in the area are being surveyed for use as troop billets.

Attachment: Sketch of the area of the gasoline dump near Klatovy.
